EVERGREEN

WE ARE HIRING

Master Electrician (m/f/d)

Technical manager, solar PV

Location Rhine-Main region **Employment** full-time, part-time, mini-job or freelance – by arrangement

Start immediately

Evergreen, based in Langen (Hesse, Germany), helps owners of commercial property earn more from their buildings: through area surveys to MF-GIF 2023 and through solar PV systems on commercial roofs whose electricity we supply directly to tenants, complemented by EV charging infrastructure.

Our background is real estate asset management; we keep decision paths short and give our people real responsibility.

To connect, commission and register our solar PV systems and charging points with the grid, we are looking for an experienced master electrician as technical manager and responsible qualified electrician.

YOUR TASKS

- Technical inspection and commissioning of solar PV systems (10–200 kWp) and charging infrastructure
- Approval of test reports and documents prepared by our team
- Grid registrations with network operators as a registered installer
- Technical guidance for our installers and electricians

YOUR PROFILE

- German master craftsman's certificate in electrical engineering or an equivalent qualification
- Experience with solar PV or low-voltage installations
- Careful and reliable way of working
- Category B driving licence

WHAT WE OFFER

- Much of the work from home, on-site visits only where technically necessary
- Working model and pay tailored flexibly to your wishes
- Short decision paths and direct contact with management
- Regional projects instead of nationwide travel

Sounds interesting? We look forward to your application.

Please email your documents, including your salary expectations and earliest start date, to **info@evergreengmbh.com**. If you have any questions, you can reach Benito Weiss on +49 176 76869812.

* This position is open to people of all genders.
